FindStringCode

Link: <https://tests.mettl.com/v2/authenticateKey/e4df74e5>

The screenshot displays the Mercer Mettl online assessment interface. The browser address bar shows the URL: <https://tests.mettl.com/v2/test-window/open/0/0?key=4a72723f>. The interface includes a header with the Mercer Mettl logo, user information (deepi, LP_Practice_2ndWordUppercase), and a 'Finish Test' button. The main content area is divided into two sections: a question panel on the left and a code editor on the right.

Question 1 (Revisit Later):

How to Attempt?

Read second word and change to Uppercase: Write a function (method) that takes as input a string (sentence), and returns its second word in uppercase.

For example -
If **input1** is "Wipro Technologies Bangalore", the function should return "TECHNOLOGIES"
If **input1** is "Hello World", the function should return "WORLD"
If **input1** is "Championship 2017 League", the function should return "2017"

Code Editor:

Language: CSHARP, Compiler: Mono 4.2.1, Attempted: 0/1

```
1 using System;
2 using System.Collections.Generic;
3
4 //Read only region start
5 public class UserMainCode
6 {
7     public string secondWordUppercase(string input1)
8     {
9         //Read only region end
10        //Write code here
11        throw new NotImplementedException("Method secondWordUppercase(str1
12    }
13 }
```
